

VersaSuite EHR

Electronic Health Record

VersaSuite EHR is a feature rich and customizable Electronic Health Record solution designed to meet the specific needs of any organization

With the increasing demand for better portability of clinical information and more accurate and consistent documentation, VersaSuite EHR rises as an industry leader providing a flexible and powerful Electronic Health Record. Designed to improve the efficiency and quality of patient care, it offers the clinician the ability to capture and recall patient information whether it is in text, image, audio, or video formats.

Based on a contemporary windows interface, it is compatible with all Microsoft Office applications. VersaSuite EHR can be interfaced with other medical electronic equipment, enabling it to directly import information into the patient electronic health record.

Medical facilities can utilize VersaSuite EHR's extensive library of exam templates to document patient encounters. More demanding environments can utilize the powerful template editor to create and customize data capture forms by a simple drag and drop facility. This gives VersaSuite EHR a unique advantage of being able to adapt to the clinician, rather than forcing the healthcare provider to change routines to follow boilerplate exam templates.

Referral letters are quickly produced and customized directly from the patient clinical record. The correspondence can be printed, faxed, emailed, or merged with Microsoft Word. Several standard templates can be developed and stored to facilitate the most common needs.

Advanced features like sophisticated drawing tools and on the fly data graphing allow for accurate review of significant findings. The ability to do side-by-side comparison of historical data and images with current findings allows a complete perspective on a patient's history and trends. The data captured can be linked to other VersaSuite modules, such as practice management and reporting, making it a fully integrated system and a paperless solution for the modern medical practice.

VersaSuite EHR is Electronic Health Records done right!

Features at a Glance

- User Definable Layout and Design
- Direct Interface with Other Electronic Equipment
- Simple and Fast Data Entry
- Side-by-Side Comparisons
- Sophisticated Drawing Tool
- Automatic Creation of Letters, Prescriptions, Emails, Reports
- Ability to Import and Export Image, Audio and Video Files
- Easy to Use Provider Work Flow
- Complete Practice Management Integration
- Complete Document Management of Paper Records
- Unparalleled Security
- Powerful Report and Outcome Analysis
- Knowledge Engine
- Supports Complex Conditional Statements
- Patient Education
- HIPAA Compliant
- Worldwide Access to Records
- Efficient and Cost Effective

“VersaSuite is the most complete, efficient, user-friendly, versatile EMR and Practice Management software package available anywhere. Period.”

Jordan Sterrer, M.D.
Northfield, MN

User Definable Layout and Design

While an extensive library of exam templates is available for major medical disciplines, VersaSuite EHR does not force the clinician to follow the predefined flow of boilerplate templates. Control of the look and content of data entry forms rests with each user. You can alter your forms from a library of templates, components, and graphical clinical systems using the drag and drop utility or use the advanced design features to create your own unique components from scratch.

Direct Interface with Other Electronic Equipment

VersaSuite EHR supports all major electronic communication standards and all major imaging formats allowing interface with an ever growing variety of applications and diagnostic and screening instruments such as the Humphreys Field Analyzer. For the latest list of equipment supported, please contact our sales office.

Management of images, video clips and other advanced diagnostic instruments give instant access to important information

Simple and Fast Data Entry

As a true Windows application, data entry options are plentiful. Touch screen lists, mouse driven drop boxes, drag and drop icons, and voice and handwriting recognition are a few of the options for efficient data entry. One touch loading of default findings and previous examination results makes data entry simple and fast. Automatic coding suggestions reduce errors and speed up patient flow through the practice.

Side-by-Side Comparisons

Historical data can be viewed during the course of an exam with differences highlighted to illustrate important trends. Previous exam images and documents can be displayed beside current ones for comparison. Critical data parameters can be viewed for comparison or graphically displayed to follow patient progress.

Sophisticated Drawing Tool

Drawings of clinical findings are simplified by dragging and dropping icons of findings to custom background images which represent appropriate organs, systems, or body areas. With a simple action, the drawing is completed and the underlying coding and exam note narrative is produced.

Sensitive to user defined regions and nomenclature, the final documentation results not only from which finding is used, but also the location or region on which it is placed on the background.

Additionally, freehand drawings can be added with custom text. Risk assessments and diagnosis codes can be identified. The drawings and the associated narratives can then be incorporated into referral letters, patient letters, encounter notes, or any other correspondence as required.

The screenshot displays the VersaSuite EHR interface for a patient exam. The main window is titled "Exam" and shows a patient record for "Roy, Sloan" with provider "Abeloff, Frederic". The interface is divided into several sections:

- Left Panel:** A navigation tree with categories like "Brief Op Report", "Full Exam", "Full Exam - Contact Lens", "Full Exam - Glaucoma", "History", "Preliminaries", "Refractions", "Intraocular Pressure", "Anterior Segment Exam", "Posterior Segment Exam", "Additional Test", "Visual Fields", "Fundus Photos", "Assessment/Plan", "Prescriptions/Sign off", "E/M Coding", and "PreOp Exam".
- Top Panel:** A series of tabs for different exam components: "Full Exam - Glaucoma History", "Preliminaries", "Refractions", "Intraocular Pressure", "Anterior Segment Exam", "Posterior Segment Exam", "Additional Test", "Visual Fields", "Fundus Photos", "Assessment/Plan", "Prescriptions/Sign off", and "E/M Coding".
- Center Panel:** Two side-by-side fundus photography images labeled "Fundus OD" and "Fundus OS". Each image shows a retinal fundus with a central optic disc and surrounding vessels. The images are dated "02/13/2005 10:09" and "02/13/2005 10:07" respectively.
- Bottom Panel:** A "Fundus Synopsis" table with columns for "ID", "Provider", "Date Created", "Fundus OD", and "Fundus OS".

ID	Provider	Date Created	Fundus OD	Fundus OS
1	123 Roy, Sloan	2/14/2005 5:23:38 PM		
2	119 Roy, Sloan	12/27/2005 1:03:53 PM		
3	116 Roy, Sloan	12/1/2005 5:45:04 PM		

“Implementation of Versasuite’s EMR program has enabled me to have easy access to all of my patients’ records from both of my offices, my surgery center, and even my home.”

Thomas Tayeri, M.D.
Palo Alto, CA

Automatic Creation of Letters, Prescriptions, E-mails, Reports

With up to 16 document variations per template and the ability to export data to an unlimited number of letter templates, VersaSuite EHR accomplishes even complex correspondence needs efficiently. The use of different languages or phrases can be customized to enhance effective communication with the intended audience. The resulting letters, prescriptions of drugs or other items can be printed, faxed or emailed to appropriate recipients.

Ability to Import and Export Image, Audio and Video Files

Patient and procedure videos can be attached to an encounter together with any voice files like letter dictations or commentaries. Combined with the routine exam documentation a complete patient health record is compiled in one, easy to access, location.

Easy to Use Provider Work Flow

When integrated with the VersaSuite’s Practice Management module, the workflow screen brings all the pending activities of a provider in one place. For a given day or range of days, you will see all scheduled patients, the status of the appointments, and the list of pending tasks organized by action types in one global view.

Complete Practice Management Integration

Scheduling, prescriptions, laboratory orders and inventory utilization can be linked to the health record templates. In addition, any fees incurred during the course of treatment are automatically communicated to patient billing, thereby reducing potential errors and increasing the speed of invoicing. Integration across all functionalities improves efficiency and makes the true paperless environment a reality.

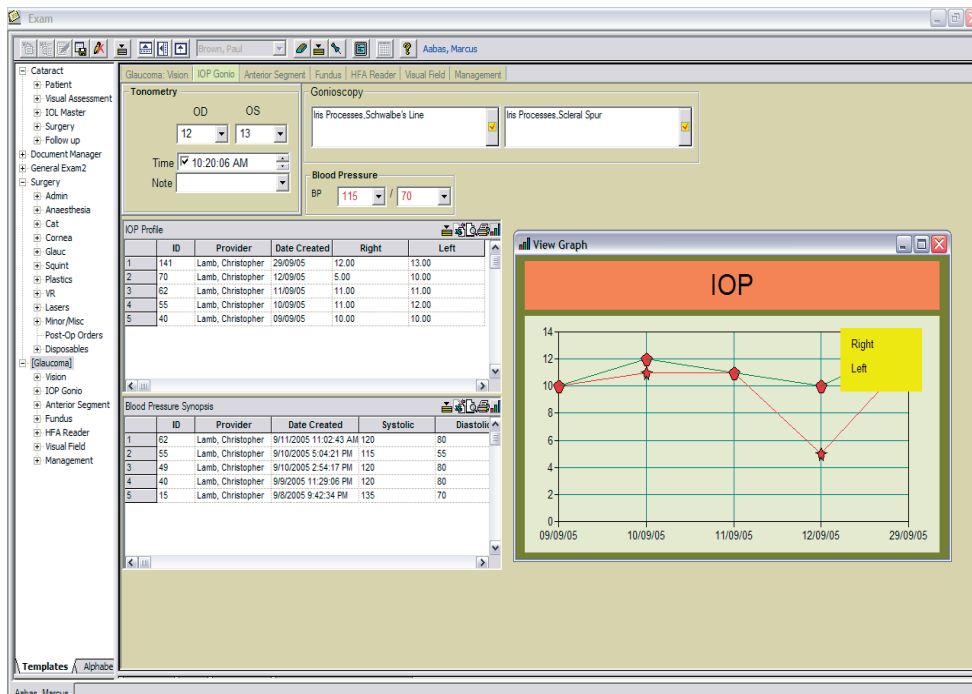

Complete Document Management of Paper Records

Existing or newly produced paper-based documents can be scanned directly to the patient record and categorized for quick retrieval. Incoming consults and histories from other facilities can be included in the electronic record. Previous paper records can be scanned and stored and existing video or image files can be attached for comprehensive information management.

Unparalleled Security

Access to virtually any area of VersaSuite EHR can be granted by user or groups of users which can be set by job description or other criteria. A number of privilege levels are available, including the ability to only view an area, total denial of access and edit or deletion authorities. Several activities have additional password verification such as the signing off of an encounter by a provider. For added security and tracking of activities, every click on an examination template is recorded. All edits and deletions are time stamped and a complete audit trail is produced.

Quick access to and graphing of historical data results in greater quality of patient care

"The integrated scheduling, billing, reporting, and EHR functionality has allowed us to eliminate 3 separate legacy systems making our practice much more efficient and our data much easier to maintain. VersaSuite is a complete Practice Management System."

Darren Jones, Administrator
New View Laser Eye, Inc.

Powerful Report and Outcome Analysis

The powerful data mining tool included with VersaSuite EHR enables interrogation of the database to produce in-depth statistical and trend analysis. These reports can be produced as needed or saved to be used on a recurring basis. The queries can also be scheduled to run automatically. An example of the power of this utility is the generation of mailing lists based on past clinical findings combined with demographic information such as age.

Integrated with Other Windows Programs

Reports and letters can be exported to other programs including Microsoft Excel or Word for further analysis or formatting. Files received can be attached in their native file format and viewed in the corresponding program, launched directly from the patient record.

Knowledge Engine & Triggers

Intelligent design within VersaSuite EHR highlights, among other things, allergies and drug-to-drug interactions. Using comprehensive logical, mathematical, and operational statements, complex conditional statements, known as triggers, could be built to generate outcomes or suggest additional documentation based on finding matrices. Triggers can be established to monitor staff events, notifying the user that an intended action needs additional follow-up. These triggers can be set off by any action, such as modification of an entry in an exam template or selection of a particular finding that needs additional testing or treatment.

Patient Education

VersaSuite interfaces with a number of patient education services covering all medical disciplines. They all provide invaluable educational material in a several languages. For the latest list of products supported, please contact our sales department.

HIPAA Compliant

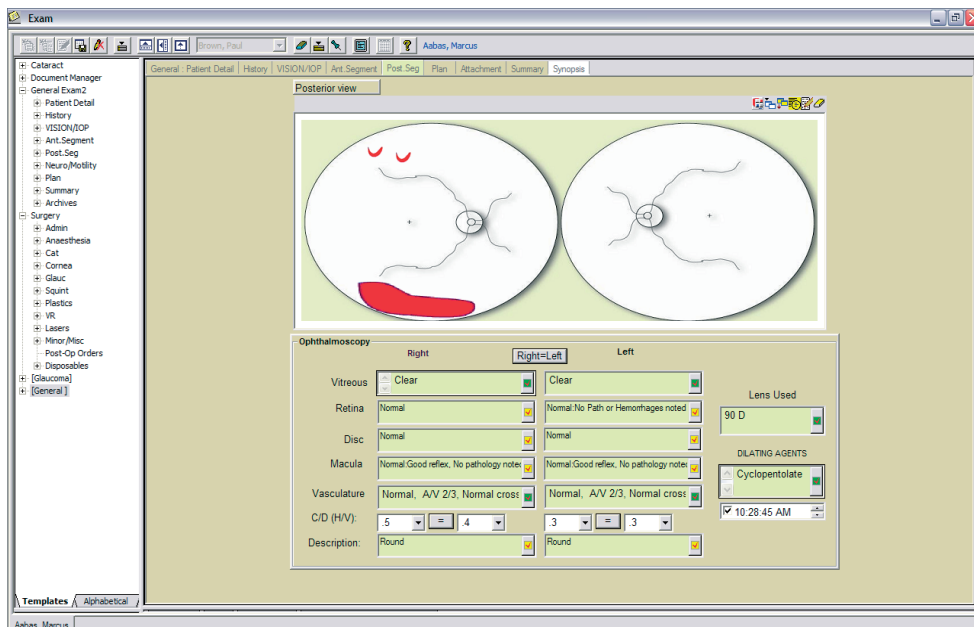

Designed from the ground up to meet all HIPAA requirements VersaSuite EHR provides for the protection of patient confidentiality and ensures portability of the record.

Worldwide Access to Records

Accessing patient records for review and editing in VersaSuite EHR is possible from anywhere in the world. Whether sitting in the comfort of your own home or selflessly volunteering in a setting half way around the world, keep in touch with your office and your patients via VersaSuite EHR

Efficient and Cost Effective

By streamlining your operation and reducing your costs, VersaSuite EHR not only enables you to provide a high quality service to your patients but also ensures the commercial competitiveness of your organization. Put VersaSuite EHR to work for you and your patients today!
